

# Pie Pandemonium!

Congratulations on your new job at Pauli's Puzzling Pies!

As your first task, Pauli wants to see if you can stock the display case, but Pauli is very particular as to which pies go where. You need to stock the display case according to Pauli's perplexing instructions. The case has 3 shelves each with 5 places, one flavor to each place.

Flavors: Strawberry, Mississippi Mud, Vanilla Cream, Black Cherry, Salt Caramel, Hazelnut, Coconut Cream, Apple Butter, Blood Orange, Boysenberry, Key Lime, Butterscotch, French Silk, Kiwi, Peanut Butter.

1. The top and bottom on the left side start with the same letter, as do the top and bottom on the right (different than the left).
2. The two chocolate-based flavors are adjacent diagonally.
3. No "nut" flavors are in the bottom row; each one touches at least one other.
4. Neither end (left nor right) has a flavor with a "c" in the name.
5. The "Cream" flavors do not touch and are not in the same row or column.
6. The bottom row is the only row to contain all two-word flavors.
7. No flavor in the middle row has a word starting with "C".
8. The two flavors with alliterative names are adjacent on the same row.
9. The middle row alternates between one-word and two-word flavors.
10. The second column contains two adjacent fruit flavors.
11. The flavor on the right-side, middle row, starts with a letter adjacent in the alphabet to the ones above, below, and beside it.
12. The fourth column contains no fruit flavors.

Touch/adjacent include vertical, horizontal, or diagonal.

Pauli's instructions may seem irrational, but you need to follow them to the letter if you want to learn what he's trying to get across. Good luck!
